Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 4-8, and 11-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoda et al. (5,987,294) in view of Abe et al. (6,078,760). Yoda et al. teaches a fusing system having more than one pressure roller (Figure 8).

Abe et al. teaches a fusing system that performs plural fixing for duplex and glossy images. It would have been obvious to one of ordinary skill in the art at the time the invention was made to teaching of Abe et al. with the image forming device of Yoda et al. to obtain matted or glossy images having excellent image quality (Abe et al.; column 6, lines 52-60).

Yoda et al. does not discuss a fixing device having three pressure rollers. It would have been an obvious matter of design choice to use three pressure rollers, since applicant has not disclosed that using three pressure roller solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well
